SLOWMIST

Wallet Application
Security Audit Report

Table Of Contents

1 Executive Summary

On 2022.10.09, the SlowMist security team received the Bitizen team's security audit application for Bitizen Wallet iOS, developed the audit plan according to the agreement of both parties and the characteristics of the project, and finally issued the security audit report.

The SlowMist security team adopts the strategy of "black/grey box lead, white box assists" to conduct a complete security test on the project in the way closest to the real attack.

The test method information:

Test method	Description
Black box testing	Conduct security tests from an attacker's perspective externally.
Grey box testing	Conduct security testing on code modules through the scripting tool, observing the internal running status, mining weaknesses.
White box testing	Based on the open source code, non-open source code, to detect whether there are vulnerabilities in programs such as nodes, SDK, etc.

The vulnerability severity level information:

Level	Description
Critical	Critical severity vulnerabilities will have a significant impact on the security of the project, and it is strongly recommended to fix the critical vulnerabilities.
High	High severity vulnerabilities will affect the normal operation of the project. It is strongly recommended to fix high-risk vulnerabilities.
Medium	Medium severity vulnerability will affect the operation of the project. It is recommended to fix medium-risk vulnerabilities.
Low	Low severity vulnerabilities may affect the operation of the project in certain scenarios. It is suggested that the project team should evaluate and consider whether these vulnerabilities need to be fixed.
Weakness	There are safety risks theoretically, but it is extremely difficult to reproduce in engineering.

Level	Description
Suggestion	There are better practices for coding or architecture.

2 Audit Methodology

The security audit process of SlowMist security team for wallet application includes two steps:

The codes are scanned/tested for commonly known and more specific vulnerabilities using automated analysis tools.

Manual audit of the codes for security issues. The wallet application is manually analyzed to look for any potential issues.

The following is a list of security audit items considered during an audit:

NO.	Audit Items	Result
1	App runtime environment detection	Passed
2	Code decompilation detection	Fixed
3	App permissions detection	Passed
4	File storage security audit	Passed
5	Communication encryption security audit	Passed
6	Interface security audit	Fixed
7	Business security audit	Passed
8	WebKit security audit	Passed
9	App cache security audit	Passed
10	WebView DOM security audit	Passed

NO.	Audit Items	Result
11	SQLite storage security audit	Passed
12	Deeplinks security audit	Passed
13	Client-Based Authentication Security audit	Passed
14	Signature security audit	Passed
15	Deposit/Transfer security audit	Passed
16	Transaction broadcast security audit	Passed
17	Secret key generation security audit	Passed
18	Secret key storage security audit	Passed
19	Secret key usage security audit	Passed
20	Secret key backup security audit	Passed
21	Secret key destruction security audit	Passed
22	Screenshot/screen recording detection	Confirmed
23	Paste copy detection	Passed
24	Keyboard keystroke cache detection	Confirmed
25	Background obfuscation detection	Fixed
26	Suspend evoke security audit	Passed
27	AML anti-money laundering security policy detection	Passed
28	Others	Fixed

3 Project Overview

3.1 Project Introduction

Audit Version

iOS V1.2.0: https://apps.apple.com/us/app/bitizen-defi-web3-eth-wallet/id1598283542

SHA256:47cb5599e698a0c4f5698492fa541f3ac28a16d6812ac84c68bb73ed867e630f

Fixed Version

iOS V1.2.4 (The TestFlight version provided by the Bitizen team)

SHA256:ab60dafec635058fdb588f42592505afcc3a02eac030a2745e9e0f7b86013e7a

3.2 Vulnerability Information

The following is the status of the vulnerabilities found in this audit:

| NO	Title	Category	Level	Status
N1	Decompilation security issues	Code decompilation detection	Low	Fixed
N2	Background obfuscation issue	Background obfuscation detection	Suggestion	Fixed
N3	Missing screenshot/screen recording detection	Screenshot/screen recording detection	Suggestion	Confirmed
N4	API interface parameters can be enumerated.	Interface security audit	Low	Fixed
N5	The wallet address is not fully displayed	Others	Low	Fixed
N6	Not using a secure keyboard	Keyboard keystroke cache detection	Suggestion	Confirmed

3.3 Vulnerability Summary

[N1] [Low] Decompilation security issues

Category: Code decompilation detection

Content

By dumping the `ipa` package, you can get the header file without code obfuscation of the header file.

Solution

It is recommended to obfuscate header files.

Status

Fixed

[N2] [Suggestion] Background obfuscation issue

Category: Background obfuscation detection

Content

App hangs without obfuscation.

Solution

It is recommended to monitor the app suspend operation to blur the background of the app.
Status

Fixed

[N3] [Suggestion] Missing screenshot/screen recording detection

Category: Screenshot/screen recording detection

Content

App does not detect that the phone is taking screenshots or recordings.

Solution

It is recommended to monitor the screen capture and recording of the app by the system, and make a safety
reminder.

Status

Confirmed

## [N4] [Low] API interface parameters can be enumerated.

Category: Interface security audit

Content

The server will prompt the client's api request which parameters are missing and the specific parameter types, which

has potential security risks.

When the client only submits parameters, the specific types of the parameters are exposed.

```
Request                                          Response                                    ▦ ≡ ▪
Pretty  Raw  Hex  ⊡  \n  ≡                        Pretty  Raw  Hex  Render  ⊡  \n  ≡
1 GET /v1/user-existing?uid= HTTP/2              1 HTTP/2 400 Bad Request
2 Host: api.bitizen.org                          2 Date: Thu, 03 Nov 2022 03:48:32 GMT
3 User-Agent: Dart/2.18 (dart:io)                3 Content-Type: text/plain; charset=utf-8
4 Accept-Language: en-US                          4 Content-Length: 101
5 Accept-Encoding: gzip, deflate                  5
6                                                 6 Validation errors in fields:
7                                                 7   uid: Validation error: length [{"value":
                                                    String(""), "min": Number(1)}]
```

Solution

It is recommended to standardize the error reminders on the server side to avoid the possibility of information
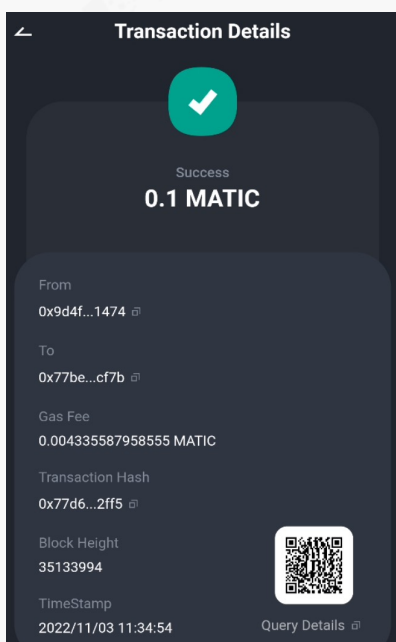

leakage.

Status

Fixed

[N5] [Low] The wallet address is not fully displayed

Category: Others

Content

The wallet does not fully display the transaction address, and users need to enter the blockchain browser to view the

transaction details to know the complete transaction address.This can easily be used for phishing using similar

addresses.

Solution

It is recommended that the wallet provide the function of fully displaying the transaction address to avoid phishing to

deceive the transaction address.

Status

Fixed

[N6] [Suggestion] Not using a secure keyboard

Category: Keyboard keystroke cache detection

Content

Third-party input methods will collect user input, which may lead to leakage of sensitive information.

Solution

A secure keyboard is recommended.

Status

Confirmed

4 Audit Result

Audit Number	Audit Team	Audit Date	Audit Result
0X002210270003	SlowMist Security Team	2022.10.09 - 2022.10.27	Passed

Summary conclusion: The SlowMist security team use a manual and SlowMist team's analysis tool to audit the project, during the audit work we found 3 low risk, 3 suggestion vulnerabilities. And 2 suggestion vulnerabilities were confirmed. All other findings were fixed. We extend our gratitude for Bitizen Wallet team recognition of SlowMist and hard work and support of relevant staff.

5 Statement

SlowMist issues this report with reference to the facts that have occurred or existed before the issuance of this report, and only assumes corresponding responsibility based on these.

For the facts that occurred or existed after the issuance, SlowMist is not able to judge the security status of this project, and is not responsible for them. The security audit analysis and other contents of this report are based on the documents and materials provided to SlowMist by the information provider till the date of the insurance report (referred to as "provided information"). SlowMist assumes: The information provided is not missing, tampered with, deleted or concealed. If the information provided is missing, tampered with, deleted, concealed, or inconsistent with the actual situation, the SlowMist shall not be liable for any loss or adverse effect resulting therefrom. SlowMist only conducts the agreed security audit on the security situation of the project and issues this report. SlowMist is not responsible for the background and other conditions of the project.
